

A recommendation for Dganit Hartman

Dganit has worked at MSR, the national center for medical simulation, for almost 5 years and was responsible for the areas of information systems and digital services including:

- Establishing and managing a MOODLE-based functional learning site for completing information by digital courses for the simulation workshops.
These are used by Israeli and international clients, including for medical internship preparation and as a platform for exams for medical and nursing teams.
- Establishing and managing an information site for MSR, including publications in the media, editing a digital newspaper for the events and activities of MSR in Israel and around the world, and managing media campaigns.
- Employee training for the development and debugging of MSR's core system of video-based debriefing.
- Producing the organization's biannual newspaper and the distribution in Israel and internationally.

Dganit is extremely competent and conscientious, always maintaining the highest standards of professionalism in her work. She has a wide range of skills and talents and is able to function independently in her fields of expertise.

I am able to recommend her without reservation and am certain that she will be a great asset to any organization that employs her.

Ravid Segal

Chief Technology Officer
